ABSTRACT OF THE DISCLOSURE

SOFTWARE AND METHOD FOR PERFORMING DATABASE OPERATIONS

Elements of one or more database manipulation language (DML) commands strings are stored in tables, read from those tables and DML commands are generated. Storing these command elements in tables facilitates access to and modification of database commands used in data processing applications. Temporary storage control elements are also stored in and read from those tables. The DML query command string is executed, the retrieved data is stored in temporary storage as specified by the temporary storage control elements and is bound to the parameters to the DML storage command strings which are executed to modify target database tables.
